

HYDROFLEX® Splashbags

HydroFlex makes splashbags to accommodate most professional film and digital video cameras. More than a rain cover, a splash bag is a sealed unit with a custom dry-suit type zipper that allows easy access to a camera while ensuring full protection from rain or other wet conditions. It can be used hand-held or mounted on a tripod or crane.

Splashbags are available in two basic styles; "Studio build" and "Hand Held." (see next page for explanation of the differences) Many different cameras can be protected in each of them.

The Splashbags leave plenty of room inside for lens control systems, on board batteries and video transmitters. Battery, media and most lens changes can be made easily without removing the camera from the bag.

A splash bag combined with our Hydro-Head remote pan & tilt head, allows smooth seamless remote camera use in rain, a dump tank, a boat, or any other wet location. Splash bags are not immersible and should be used for surface use only. For camera protection while filming underwater, see Camera Housings.

All of our splash bags have integral spray deflecting air knives built into the matte box to prevent water drops from collecting in front of the lens. An internal defogging system keeps condensation from forming on the glass.

NOTE: the Spray Deflector support equipment is an optional, separate rental item.

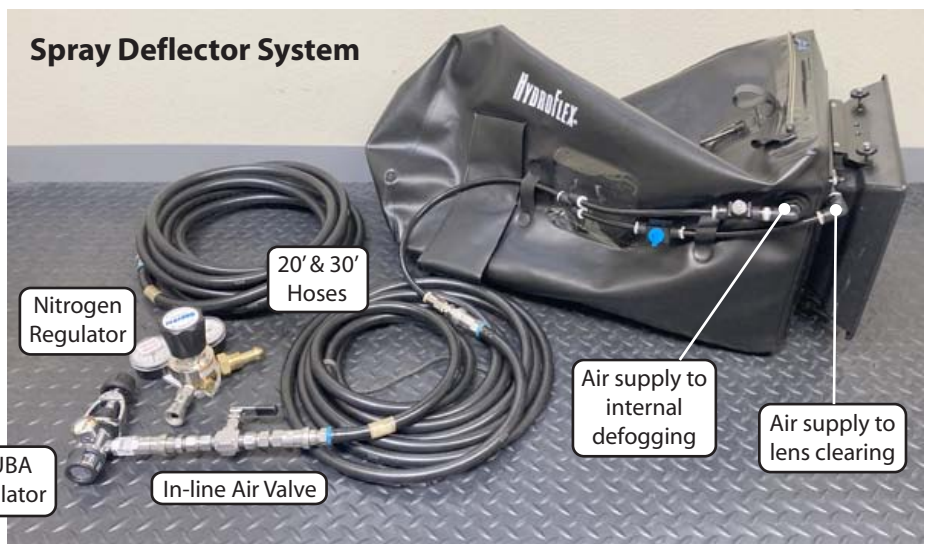

Studio Splashbag

Hand Held Splashbag

On board monitors can be protected with two sizes of **Monitor Rain Covers** to accommodate up to 7" monitors.

Spray Deflector System

SCUBA Regulator

In-line Air Valve

20' & 30' Hoses

Nitrogen Regulator

Air supply to internal defogging

Air supply to lens clearing
